

# Future recurrent-state recovery value differs by workflow boundary

Single sequential 32K-parent workflow; WP2 marginal slope  $\times$  avoided replay tokens

All boundaries

Non-fork zoom

One-miss holds exact-prefix FA-KV resident; first replay self-heals. Slope transfer assumes no replay  $\times$  64-fresh-token interaction.

\*Resume is terminal/right-censored. Values are not direct latency measurements.
